DATE MAILED: 06/16/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	09/955,427	TOJI ET AL.
	Examiner	Art Unit
	Chriss S. Yoder, III	2612

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 18 January 2005.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-14 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 19 September 2001 is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action.

Claim Objections

Claim 1 is objected to because of the following informalities:

Claim 1 recites the limitation "the predetermined coefficient" in line 22. There is insufficient antecedent basis for this limitation in the claim.

The examiner believes that this should read "a predetermined coefficient ", and will be examined as understood by the examiner.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-¹⁴~~2~~ are rejected under 35 U.S.C. 102(e) as being anticipated by Dotubo et al (US Patent # 6,556,243) in view of Miyamoto (US Patent # 6,593,965).
2. In regard to claim 1, note Dotubo discloses the an information-image displaying method for displaying an information image on a display in which a taken subject image

is displayed on said liquid crystal display after a thinning process has been executed in accordance with a screen pixel number of said liquid crystal display (column 4, lines 55-65), and includes the steps of producing an original image of said information image in accordance with a primary pixel number of said subject image (column 11, lines 56-66 and figure 20: S301-S311, the image resolution of the "photographed image" and the "title image" are matched), executing a low-pass-filter process for said original image to obtain said information image, said low-pass-filter process performing an operation process relative to data of original pixels of said original image to calculate data of each pixel of said information image (figure 8: S31-S33; and column 8, lines 55-60), storing said information image in storage means (figure 8: S47), reading said information image from said storage means (figure 14: S129) and displaying said information image on said screen of said liquid crystal display after said thinning process (column 6, lines 35-40; column 14, lines 35-47, the image can be displayed after thinning; and figure 14: 137 and figure 20) and that the original pixel to be processed and the adjacent (N-1) original pixels thereof are weighted to be added in said operation process, wherein said "N" is a natural number more than "3" (column 5, lines 50-55; in this case, four adjacent pixels are used to calculate one original pixel). Therefore, it can be seen that Dotsubo fails to disclose that each pixel is multiplied by a predetermined coefficient. Miyamoto discloses the use of each pixel being multiplied by a predetermined coefficient and summed up (column 5, lines 1-6). Miyamoto teaches that the use of each pixel being multiplied by a predetermined coefficient is preferred in order to obtain and display the interpolated image at high speed (column 2, lines 8-10). Therefore, it would have been

obvious to one of ordinary skill in the art to modify the Dotsubo device to include the use of each pixel being multiplied by a predetermined coefficient as suggested by Miyamoto.

3. In regard to claim 3, note although Dotsubo does not directly disclose that N is greater than a maximum thinning number used in said thinning process, it is inherent that N is greater than the maximum thinning number (if N was smaller than the maximum thinning number, the information image would appear as dots, dotted lines or nothing at all after the thinning process).

4. In regard to claim 4, note Dotsubo discloses an imaging device that produces a thinned image as claimed in claim 1, as well as the use of a plurality of elements in the original image arranged at intervals so as to avoid affecting each other after the low-pass-filtering process (figure 6a: "CONGRATULATIONS!", each letter and symbol is considered to be an element; figure 6c: this is evidence that the elements are arranged at intervals so as to avoid affecting each other after the low-pass-filtering process). Therefore, it can be seen that the Dotsubo device lacks the use of a plurality of elements comprising a letter, a mark and a figure. However, Dotsubo does disclose the use of the elements separately (figures 5-6), and it would be obvious to use them in the same image based on design choice (the image that is used as the original image to create the information image can be an image that includes anything, i.e. a letter, a mark, and/or a figure). Therefore, it would have been obvious to one of ordinary skill in the art to modify the Dotsubo device to include the use of a plurality of elements comprising a letter, a mark and a figure based on design choice.

5. In regard to claim 5, note Dotubo discloses that the brightness level of each pixel of said information image is calculated in said low-pass-filter process (column 8, lines 52-58; and figure 8: S31-S33, the steps S31-S33 are considered to be the low-pass-filter process where the brightness is calculated in S31).
6. In regard to claim 6, note Dotubo discloses that the low-pass-filter process is executed relative to a horizontal direction of said original image (column 5, lines 50-56).
7. In regard to claim 7, note Dotubo discloses that N is "5" containing the original pixel to be processed and two original pixels of each side thereof (column 5, lines 50-55).
8. In regard to claim 8, note although Dotubo does not directly disclose that the interval that corresponds to the original pixels is at least five, it is inherent that the interval be greater than or equal to "N" (after the low pass filter, if the interval were less than "N" the elements would overlap and become one element).
9. In regard to claim 9, note Dotubo discloses an imaging device that produces a thinned image as claimed in claim 1. Therefore, it can be seen that the Dotubo reference fail to disclose the use of data ROM as the storage means. The template image used on figure 5 is stored on a memory card 46 (column 6, lines 48-57). Official notice is taken that the concepts and advantages of using data ROM are notoriously well known and expected in the art. Therefore, it would have been obvious to one of ordinary skill in the art to modify the Dotubo reference to include the use of a data ROM to store the template image for permanent storage and to protect the image from being overwritten.

10. In regard to claim 10, note Dotubo discloses that the information image read from said data ROM is composed with said subject image to be displayed on said liquid crystal display (figure 1: 34; figure 5; and column 2, lines 4-11; and column 14, lines 35-47, the composite image can be displayed).

11. In regard to claim 11, note Dotubo discloses an imaging device that produces a thinned image as claimed in claim 1. Therefore, it can be seen that the Dotubo device fails to disclose that the information image is displayed in the right-upper corner of said subject image. However, Dotubo does disclose the use of different types of information images (figures 5-6), and it would be obvious to alter the locations of the images within the subject image based on design choice (the image that is used as the original image to create the information image can be an image that contains elements anywhere within the image, i.e. the right-upper corner). Therefore, it would have been obvious to one of ordinary skill in the art to modify the Dotubo device to include the use elements in any location based on design choice.

12. In regard to claim 12, note Dotubo discloses an imaging device that produces a thinned image as claimed in claim 11. Therefore, it can be seen that the Dotubo device fails to disclose that the information image is displayed in a state that white letters are arranged in a black region. However, Dotubo does disclose the use of different types of information images (figures 5-6), and it would be obvious to change the colors of the image based on design choice (the image that is used as the original image to create the information image can be an image that contains elements of any color, including white letters are arranged in a black region). Therefore, it would have

been obvious to one of ordinary skill in the art to modify the Dotsubo device to include the use of an information image that is displayed in a state that white letters are arranged in a black region based on design choice.

13. In regard to claim 13, note Dotsubo discloses that the apparatus is a digital camera (column 1, lines 30-35).
14. In regard to claim 14, note Dotsubo discloses an imaging device that produces a thinned image as claimed in claim 13. Therefore, it can be seen that Dotsubo fails to disclose that the liquid crystal display is provided on a rear face of said digital camera. Official notice is taken that the concepts and advantages of providing the LCD on the rear face of the camera are notoriously well known and expected in the art. Therefore, it would have been obvious to one of ordinary skill in the art to modify the Dotsubo device to include the use of an LCD on the rear of the camera in order to allow the user to view the image while capturing.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chriss S. Yoder, III whose telephone number is (571) 272-7323. The examiner can normally be reached on M-F: 8 - 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wendy Garber can be reached on (571) 272-7308. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
